

IMPORTANT UPDATE FOR ALL ACS DIAGNOSTICS LABORATORY USERS

Dear Valued Customer,

Many of our customers are calling to report an increased need for Cardiac Outpatient Monitoring Services. This is attributed, in large part, to the stress experienced by their age-related patient population. The increase of COVID-19 cases and continuous news reportings are causing an increase in cardiac symptoms. Unfortunately, many of these patients have been advised to stay at home.

Since many in-person office tests... ekg's, echos, treadmills, etc. are impractical during this time, Telemedicine helps you provide continued patient care while keeping staff & patients healthy and less exposed.

ACS Diagnostics has established a new program that allows you to bring the "*Diagnostic Test to your Patient*" (MCT) rather than the patient coming to your practice. All you need to do is identify a patient, and ACS will do the rest. We manage the logistics of the CORE monitoring process by arranging for the devices to be shipped from your office directly to the patient. We then interact with the patient for the hook-up and will provide to you the requested continuous monitoring coverage.

Please allow us to help by calling our laboratory today.
